

INSPIRATIONS FROM SKIHYTTA

ØST-MOSS

Yale University ->  
Beinecke library ->  
Voynich manuscript

Lets look at this ring

Yale University →  
Beinecke library →  
Voynich manuscript

There are 4 sequences  
with 17 glyphs in each  
sequence

Yale University →  
Beinecke library →  
Voynich manuscript

Figure 1 displays a 4x17 grid of handwritten Chinese characters from the 'Shu Wen' dataset. The grid is organized into four rows, each representing a different sequence of characters. The characters are written in a traditional, cursive style. Red dashed boxes highlight specific characters: the 16th character of Sequence 1, the 8th character of Sequence 2, the 9th character of Sequence 3, and the 1st and 8th characters of Sequence 4. A small '90' is visible near the 8th character of Sequence 4.

These are the same four sequences in the ring shown  
as four lines instead

Sequence 1

Sequence 2

Sequence 3

Sequence 4

Notice this deviation -> its actually a clue for leap calendar system

..and following the leap system theory we can find solstice and equinox

|        | January                                                                           | February                                                                          | Mars                                                                              | April                                                                             | May                                                                                | June                                                                                | July                                                                                | August                                                                              | September                                                                           | October                                                                             | Deseember                                                                           |                                                                                     |                                                                                     |                                                                                     |                                                                                     |                                                                                     |                                                                                     |

..from 57v we can now make “rules of glyph”: One glyph “words”

..testing "rules of glyph" on 115r line 3

Yale University →  
Beinecke library →  
Voynich manuscript

There is at date description here. Its a eclipse date  
85v:

possible target (oldest recorded):  
Solar eclipse BC 1312 24 june (Anatolia)

Examples

115r-13  
2-1-Equinox  
(21.3)

Translation : BC 1312- 5 june - ECLIPSE

When we know the date of eclipse we can find the place where it happened (Sicily/Pal)

24 June 1312 BC, total eclipse, maximum at 10:44 UTC,  
38.2°N 13.7°E (Sicily)

Latin: Month, day, year  
Greek: day, month, year  
Voynich: year small, year big, day, month, sun phase
